[MS-NRPC]: Netlogon Remote Protocol

August 24, 2020 – Download

Errata below are for Protocol Document Version V37.0 - 2020/08/26

Errata Published*	Description
2020/10/26	In Section 3.1.4.6 Calling Methods Requiring Session-Key Establishment, added a reference to product note 74 and clarified product notes 74 and 76. Changed from: <74> Section 3.1.4.6: Whenever a Windows 7 client or later creates a secure channel with a Windows Server 2008 server or later, the server will enforce that clients are using RPC Integrity and Confidentiality to secure the connection. <76> Section 3.1.4.6: Windows NT, Windows 2000, Windows Server 2003, and Windows Server 2008 allow the call to succeed. Changed to: 1.2.2 Informative References . . . [MSFT-CVE-2020-1472] Microsoft Corporation, "CVE-2020-1472 | Netlogon Elevation of Privilege Vulnerability", 08/11/2020, https://portal.msrc.microsoft.com/en-US/security-guidance/advisory/CVE-2020-1472 . . . <74> Section 3.1.4.6: Windows XP and later clients will request secure RPC. Windows Server 2008 R2 operating system and later will enforce that clients are using RPC Integrity and Confidentiality to secure the connection. For more information, see [MSFT-CVE-2020-1472]. <76> Section 3.1.4.6: Windows NT, Windows 2000, Windows Server 2003, and Windows Server 2008 MS-NRPC servers do not support enforcing that clients are using RPC Integrity and Confidentiality to secure the connection.
