Errata below are for Protocol Document Version V33.0 - 2018/09/12

Errata Published*	Description
2020/10/12	In Section 2.2.9.1.2.2.2 Encrypted Data, added note about padding. Changed from: Message: The encrypted message. This is an octet stream of the encrypted SOAP message, which is encrypted and integrity-protected by using the framework as specified in [RFC4121]. The initial bytes of the Message MUST be the per-message token portion, whose length MUST be given in the Length-Field value. The remaining bytes MUST be the encrypted data, whose original length MUST be equal to the lengthvalue field as defined in section 2.2.9.1.2.2.1. Changed to: Message: The encrypted message. This is an octet stream of the encrypted SOAP message, which is encrypted and integrity-protected by using the framework as specified in [RFC4121]. The initial bytes of the Message MUST be the per-message token portion, whose length MUST be given in the Length-Field value. The remaining bytes MUST be the encrypted data, whose original length MUST be equal to the lengthvalue field as defined in section 2.2.9.1.2.2.1. Note: No padding is added irrespective of the type of cipher used for encryption.
